SIMSAFE

DIGITAL SMART LOCKERS

Technology Innovation and Acceleration Driven!

In a contemporary fast-paced environment, the significance of technology in fostering innovation and hastening, advancement is paramount. Technology possesses the capability to transform industries and enhance operational efficiency!

SIMSAFE

DIGITAL SMART LOCKERS

All SIMSAFE lockers offer secure access control through keypads, biometrics, or access cards, allowing you to easily determine who has access to specific items or compartments.

SIMSAFE can also provide RFID technology for efficient asset management within the lockers. With RFID, you can effortlessly track and manage your valuable devices.

SIMSAFE is not just a locker system; it's a sophisticated solution for managing valuables with ease and security. Whether you need to control access, track historical data, or utilize RFID technology for efficient asset management, SIMSAFE has got you covered.

For those seeking more advanced reporting and management capabilities, SIMSAFE offers:

- RFID Assignment and Management for precise asset tracking within the lockers
- Comprehensive Management and Monitoring of device charging
- Instant Event Notifications
- Advanced Reporting and Dashboards

DESIGNED AND DEVELOPED WITH YOUR REQUIREMENTS IN MIND

The SIMSAFE locker solution is an Intelligent locker with asset identification for monitoring and control of each individual asset being managed through this system.
